

ATALIS AIXM Aeronautical database

The ideal central data repository for your Aeronautical Information

ATALIS AIXM database is the core of all ATALIS AIM products. It can be used as a standalone data environment, as a global data repository or as a support for AIP publishing.

ATALIS AIXM database is a complete AIXM database which also includes an efficient workflow, as well as all required imports and exports functions for all current standards.

Highlights

- AIXM 5.1 eTOD compliant
- Internationalisation, geometry checks, spelling
- Standalone system for data originators or integrated within ATALIS AIP/MAP
- Implements AIXM and EAD interface
- Powerful workflow with enhanced data quality tool
- Graphical display in 2D/3D using © Google Earth
