

ATALIS Flight Movement Management

Provide your ATC staff with the ideal tool to efficiently manage flight information

ATALIS Flight Movement Management module provides Flight Management and Coordination support for controllers in Towers, Flight Information Centres and Area Control Centres.

ATALIS Flight Movement Management is the natural ATC extension to ATALIS Flight preparation, and, combined with ATALIS General Information Management, provides a powerful and complete Tower or Approach system.

Automatic Flight Strip can be configured according to site settings in order to match any operational situation.

Highlights

- Air Traffic Control automation
- User-friendly graphical HMI using Touch Input device screens
- Fully customisable stripping and operational configuration
- Hot/Standby architecture for high availability without SPOF
- Safety analysis compliant with SWAL3
- Interface with Airport systems
- Integration with external Radar display
