

ATALIS Flight Preparation

A rich and flexible flight planning software solution for your Briefing Offices

ATALIS Flight Preparation provides all functions required in an Airport Briefing Office to support the flight preparation (FPL deposit and process, PIB/MET production and provision).

Flight plan input, processing and exchange are performed in accordance with latest ICAO and EUROCONTROL SARPS.

CFMU dialog is automatically implemented for flights to, from or inside ECAC region.

ATALIS Flight Preparation implements a flight folder concept where all data and messages related to a flight are stored in a single object (flight plan data, history of operators' actions and messages, criteria for PIB production and notes).

ATALIS Flight Preparation implements new FPL2012 concept, and is able to process both old and new format, and broadcast message in both format, depending on AFTN destination.

Highlights

- User-friendly graphical HMI enabling an easy learning and a safe use of the system
- Web interface for Flight Plan submission
- Numerous templates and helps
- Hot/Standby architecture for high availability
- Compliant with ICAO FPL2012
- PIB level 6 with MFI® AeroMetWeb integration
